

Project Manager: Vithunan Ravichandran
Technical Manager: Tisha Patel
Front-End Lead: Omar Ahmed
Back-End Lead: Abdullah Mobashar
Software Quality Lead: Tony Ngo

Treat this meeting like a BlueSky meeting (Skys the Limit and open-minded)

- What do you want the app to do?
- What essential features do you require from the app?
- What specific problems should the app solve?
- Who are the primary users of the app?
- What specific type of game are we working with?(video games, board games, card games,etc)
- How frequently does the data in the catalogue need to be updated?
- What level of customization does the user expect?
- Does the customer want an app or a website? Or both?
- Would you want users to share their experiences? (Reviews)
- would you want us to implement a shop feature to allow checking out items
- Do you want a login feature where users require a username and password?

Briefly summarize their understanding of the project based on prior labs:

So far, we understand that we need to build a catalogue application with a front and back end and will need some form of database to work with. Our overview is that we are working with toys and games as a domain.

Customer Vision (take notes on what the TA says)

-

Jot Notes

- What do you want the app to do?
 - Command line interface as text or a GUI, no preference
 - List of stock
- What essential features do you require from the app?
- What specific problems should the app solve?
- Who are the primary users of the app, whether it be for inventory purposes or a store site?
 - Only inventory purpose
 - Not a store site
- How frequently does the data in the catalogue need to be updated?
 - About once a week
- What level of customization does the user expect?
 - A Search Function, Filter Function
- Does the customer want an app or a website? Or both?
- Would you want users to share their experiences? (Reviews)
- Do you want a login feature where users require a username and password?
 - Log into the system to protect

An app to catalogue toys and games (no video games)

Run's a toy a game store (ex. mastermind). Has a wide catalogue of inventory.

He wants to digitize his inventory tracking system.

Relevant Search Function:

What he wants in the feature:

Add new products to a database

Edit products to a database(le name,price,inventory Count,(
Remove Products

Sort/Filter Products(Cheapest/Highest)

Nice to Have a Login System.
